

Global Warming

By Anna , Kalliegh, Ben, and Noah

Global warming is when greenhouse gases trap heat into Earth's atmosphere. It has been tested that the temperature has increased by 1.4 degrees Fahrenheit and 5 degrees Fahrenheit in some other places.

The CO₂ levels have risen from 365 in 1960 to 381 in 2005. That's a LOT!

Perspectives

Problem

Quoting David Wenban “The most common problem man kind faces is taking care of its planet.”

By The Year 2050 over 1 million Plants and Animals could be extinct because of global warming .

Global warming cause serious weather disasters such as tornadoes, hurricanes , severe thunderstorms, typhoons ,etc.

Not a Problem

Quoting James M. Iyhofe.
‘It’s a unproven theory being pushed by alarmist. And if it did exist it would not bring disaster upon us instead it would benefit humanity.’

Some people say that it is only natural. That the temperature is constantly rising not because of mankind .

Effects

- Hurricanes
- Typhoons
- Melting Polar Ice Caps
- Climate Changes
- Damage to Coral reefs
- Extinction/Endangering Animals

Global Warming Effects on Animals and the Earth!

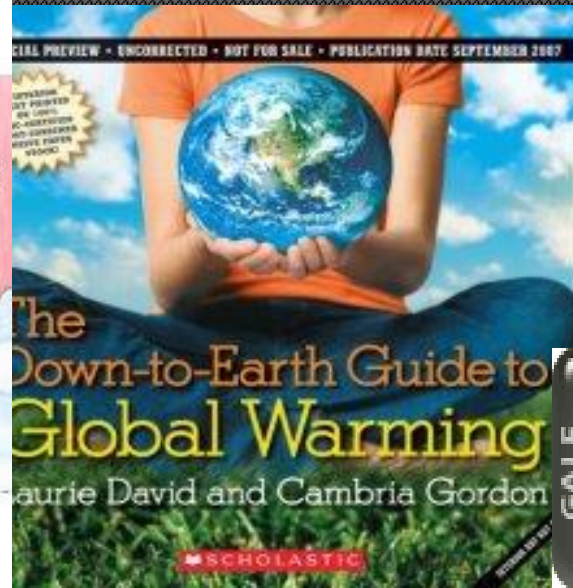

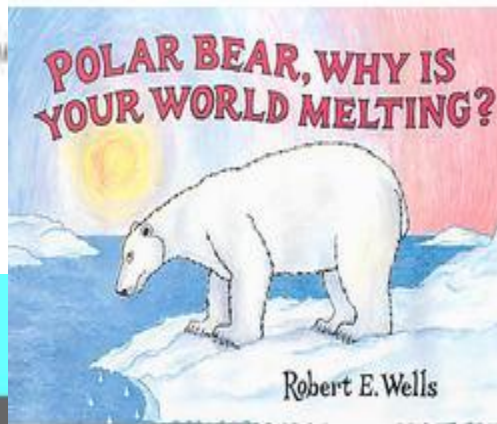

The next nearest iceberg or land is miles away .
